

GENERATION OF COMPUTER

DEFINITION

There are five computer generations known till date. Each generation has been discussed in detail along with their time period and characteristics. In the following table, approximate dates against each generation has been mentioned, which are normally accepted.

Following are the main five generations of computers.

SR. NO.	GENERATIONS & DESCRIPTIONS
1	FIRST GENERATION The period of first generation: 1946-1959. Vacuum tube based.
2	SECOND GENERATION The period of second generation: 1959-1965. Transistor based.
3	THIRD GENERATION The period of third generation: 1965-1971. Integrated Circuit based.
4	FOURTH GENERATION The period of fourth generation: 1971-1980. VLSI (Very Large Scale Integration) microprocessor based.
5	FIFTH GENERATION The period of fifth generation: 1980-onwards. ULSI (Ultra Large Scale Integration) microprocessor based.

FIRST GENERATION COMPUTERS

The period of first generation was from 1946-1959. The computers of first generation used vacuum tubes as the basic components for memory and circuitry for CPU (Central Processing Unit). These tubes, like electric bulbs, produced a lot of heat and the installations used to fuse frequently. Therefore, they were very expensive and only large organizations were able to afford it. In this generation, mainly batch processing operating system was used. Punch cards, paper tape, and magnetic tape was used as input and output devices. The computers in this generation used machine code as the programming language.

THE MAIN FEATURES OF THE FIRST GENERATION ARE:

- Vacuum tube technology
- Unreliable
- Supported machine language only
- Very costly
- Generated a lot of heat
- Consumed a lots of Heat
- Huge size and Need AC

SOME COMPUTERS OF THIS GENERATION WERE:

- ENIAC • EDVAC • UNIVAC

SECOND GENERATION COMPUTERS

The period of second generation was from 1959-1965. In this generation, transistors were used that were cheaper, consumed less power, more compact in size, more reliable and faster than the first generation. In this generation, magnetic cores were used as the primary memory and magnetic tape and magnetic disks as secondary storage devices.

In this generation, assembly language and high-level programming languages like FORTRAN, COBOL were used. The computers used batch processing and multiprogramming operating system.

THE MAIN FEATURES OF THE SECOND GENERATION ARE:

- Use of transistors
- Reliable in comparison to first generation computers
- Smaller size as compared to first generation computers
- Generated less heat as compared to first generation computers
- Consumed less electricity as compared to first generation computers
- Faster than first generation computers
- Still very costly
- AC required
- Supported machine and assembly languages

SOME COMPUTERS OF THIS GENERATION WERE:

- IBM 1620
- IBM 7094
- CDC 1604
- CDC 3600
- UNIVAC 1108

THIRD GENERATION COMPUTERS

The period of third generation was from 1965-1971. The computers of third generation used Integrated Circuits (ICs) in place of transistors. A single IC has many transistors, resistors, and capacitors along with the associated circuitry.

The IC was invented by Jack Kilby. This development made computers smaller in size, reliable, and efficient. In this generation remote processing, time-sharing, multi-programming operating system were used. High-level languages (FORTRAN-II TO IV, COBOL, PASCAL PL/1, BASIC, ALGOL-68 etc.) were used during this generation.

THE MAIN FEATURES OF THE THIRD GENERATION ARE:

- IC used
- More reliable in comparison to previous two generations
- Smaller size
- Generated less heat
- Faster
- Lesser maintenance
- Costly
- AC required
- Consumed lesser electricity
- Supported high-level language **SOME**

COMPUTERS OF THIS GENERATION WERE:

- IBM-360 series
- Honeywell-6000 series
- PDP (Personal Data Processor)
- IBM-370/168
- TDC-316

FOURTH GENERATION COMPUTERS

The period of fourth generation was from 1971-1980. Computers of fourth generation used Very Large Scale Integrated (VLSI) circuits. VLSI circuits having about 5000 transistors and other circuit elements with their associated circuits on a single chip made it possible to have microcomputers of fourth generation.

Fourth generation computers became more powerful, compact, reliable, and affordable. As a result, it gave rise to Personal Computer (PC) revolution. In this generation, time sharing, real time networks, distributed operating system were used. All the high-level languages like C, C++, DBASE etc., were used in this generation.

THE MAIN FEATURES OF THE FOURTH GENERATION ARE

- VLSI technology used
- Very cheap
- Portable and reliable
- Use of PCs
- Very small size
- Pipeline processing
- No AC required
- Concept of internet was introduced
- Great developments in the fields of networks
- Computers became easily available

SOME COMPUTERS OF THIS GENERATION WERE:

- DEC 10
- STAR 1000
- PDP 11
- CRAY-1(Super Computer)
- CRAY-X-MP(Super Computer)

FIFTH GENERATION COMPUTERS

The period of fifth generation is 1980-till date. In the fifth generation, VLSI technology became ULSI (Ultra Large Scale Integration) technology, resulting in the production of microprocessor chips having ten million electronic components.

This generation is based on parallel processing hardware and AI (Artificial Intelligence) software. AI is an emerging branch in computer science, which interprets the means and method of making computers think like human beings. All the high-level languages like C and C++, Java, .Net etc., are used in this generation.

AI INCLUDES:

• Robotics • Neural Networks • Game Playing • Development of expert systems to make decisions in real-life situations • Natural language understanding and generation

THE MAIN FEATURES OF THE FIFTH GENERATION ARE

- ULSI technology
- Development of true artificial intelligence
- Development of Natural language processing
- Advancement in Parallel Processing
- Advancement in Superconductor technology
- More user-friendly interfaces with multimedia features
- Availability of very powerful and compact computers at cheaper rates

SOME COMPUTERS OF THIS GENERATION WERE:

- Desktop
- Laptop
- NoteBook
- UltraBook
- ChromeBook
